

Amendments to the Drawings

Fig. 3 has been amended per the Examiner's request, namely reference numeral 2 now contains a reference line.

In the latest Office Action, the Examiner contended that the feature of "rounded off corner portion" found in claim 7 was not shown in the drawings. However, as can be seen in Fig. 1 of the current application, there is a peripheral wall 3 component of the container 1 as well as a bottom 2 component of the container 1 and except at the positions where the support members 4 are located, the peripheral wall 3 and bottom 2 are directly integrated into one another in a smooth rounded portion. The Applicant believes that some confusion or misunderstanding may have come from the term "corner" which implies there may be a sharp edge or seam between the peripheral wall 3 and bottom 2 components. Claim 7 has therefore been amended by replacing the term "corner" with the term "smooth" so as to more accurately match what is shown in Fig. 1.
